It is a free-to-download AutoCAD product that is available in a variety of versions. The first three releases of AutoCAD in 1982, 1983, and 1984 were all stand-alone desktop applications that were sold on-line with a supported host computer. By the year 1991, the AutoCAD brand was sold to Autodesk for US\$9 million. The company expanded AutoCAD and released

AutoCAD-X, a CAD program with extensibility and a plug-in architecture, followed by AutoCAD 2002, AutoCAD Architecture and AutoCAD LT. The last version of AutoCAD, AutoCAD R14, was released on April 23, 2017. AutoCAD was designed for CAD tasks, including architectural design and drafting, civil engineering, industrial design, mechanical design, electrical design, landscape architecture and other creative pursuits. AutoCAD has been ported to several platforms, and can also be used as a server or as a client on a network with AutoCAD on the other end. AutoCAD has been modified for Windows, macOS, Unix, and Linux. Introduction An AutoCAD host computer consists of a software and hardware platform that supports

AutoCAD. AutoCAD is available for many platforms, including Windows, macOS, iOS, Linux, and Unix. It is licensed by several computer manufacturers, such as Hewlett Packard, as well as a variety of software manufacturers, including Autodesk. AutoCAD supports several languages including English, French, German, Italian, Dutch, Japanese, Polish, Portuguese, Russian, Spanish, Swedish, and Turkish. Autodesk AutoCAD is a professional-grade software application that was first released in 1982.

Since its initial introduction, Autodesk has continued to update and refine AutoCAD to stay current with the latest trends in engineering design software. Autodesk's AutoCAD is a member of the Autodesk family, and is bundled with other Autodesk products and services, such as Architectural Desktop and Autodesk Civil 3D. Hardware Support Support for AutoCAD requires a PC with two separate video cards. One card is required to run AutoCAD, and the other is required to run a host application, such as a 3D CAD program. A host application such as Autodesk 3D CAD, Autodesk Civil 3D, Autodesk Inventor,

Features CAD (computer-aided design) is a discipline of computer-aided art that has existed in many forms since the earliest computer programs were developed in the 1970s. CAD encompasses a range of workflows that use many different methods, including parametric design, feature-based design, model-based design, and boundary-based design. The history of CAD has led to the development of a wide variety of software, hardware, and service offerings. History The first electronic design automation tools were designed by Seymour Papert at MIT in the 1960s, and implemented by his students. They provided a method of manipulating simple geometric shapes via input from a keyboard. The first software product to be branded as CAD was the Dimension 5D suite of software, developed in the 1970s by a small team of MIT students. They called their original computer CAD, rather than simply CAD, and later renamed Dimension to ObjectARX. ObjectARX was one of the first software products to use the term CAD as its primary marketing feature. The first released version of AutoCAD, AutoCAD R14, debuted in 1990. AutoCAD version 2005 was introduced in late 2004. The proliferation of computer-aided design and drafting led to the emergence of a new class of software, CAD (computer-aided design), which has been called the third generation of drafting software. CAD software has evolved from systems which can merely draw lines and circles, to systems which can design actual parts and assemblies. Usage Most of the

time, drafting is used for the design and documentation of blueprints, mechanical designs, electrical designs, and other projects requiring drafting. When requirements involve a great number of parts or large scale engineering projects, use of a CAM system might be desirable. Blueprints are often used in the manufacturing of parts. In software, drafting applications can be used for design, documentation, presentation, plotting, rendering, and tracking. For architects and interior designers, CAD software can provide an effective tool for the preparation of a design, allowing users to quickly view and manipulate the design in many different ways. For a project, a layout may be constructed, working from a set of design constraints to model the space and layout of the project, and subsequently generate a detailed a1d647c40b

Share Article NOPSE conference is a three day event where guest of honour from DST Global and external keynote speakers from industry leaders discuss the issues and challenges that exist in the end-to-end supply chain. (PRWEB)July 06, 2015 Three days of discussion and debate about supply chain processes and best practice will take place at the ninth annual NOPSE conference (www.nopse.com), which is being held at De Montfort University in Leicester, UK on October 16th to the 18th 2015. Each of the three days at this biennial event features three keynote speakers, including Dr. Sadek Housen, International Director, Strategy, ATD; Ashley Carr, Director, Supply Chain, GKN; and Angela Cowling, Director, Physical Global Merchandising, Unilever. Organised by NOPSE and an expert team of facilitators, these sessions will provide delegates the opportunity to identify the issues and challenges within their supply chain and to discuss solutions for these issues. Keynote speakers will also address the demands of the end-to-end supply chain, how to drive efficiency through technology and critical areas that need to be tackled in the supply chain, such as product development, flow and inventory management, and warehouse operations. The two-day pre-conference on October 14th and 15th will bring together key industry stakeholders including manufacturers, distributors, retailers, and service providers, for networking, discussion and education. About the NOPSE Conference The NOPSE conference is one of the largest worldwide end-to-end supply chain conferences, hosting more than 600 participants and exhibitors from nearly 60 countries, each year. This event is free to attend and NOPSE conference delegates benefit from a business networking lunch, Monday evening reception, and free hospitality at the Grand Hotel. Other benefits include programme sponsorship, media access, and the industry's biggest showcase of end-to-end supply chain solutions on stand M110.
