Valerio Plozza, Fanzun AG AxisVM official distributor in Switzerland: Ingware AG. Slinex, one of the world leaders in the production of fire and security alarms and access control systems, has developed a new technological concept that has no analogues in the world. Video surveillance and access control systems from Slinex and CISCO Video surveillance is an important component of security systems. It allows not only to prevent crime and terrorism, but also to monitor the surrounding area, the parking lot, the visitors of your office, enterprise, and even the residents of the house. Today, video surveillance systems based on IP video cameras, analog video surveillance cameras, HD-SDI cameras, IP video surveillance systems have been developed and successfully operated. When choosing equipment, you should take into account the security requirements for the video surveillance system and take into account factors that affect image quality and accuracy. Important factors when choosing are: resolution, viewing angle, color, pixel power, number of surveillance cameras. Video surveillance systems provide various functions: security, access control, face recognition, movement, control. Video surveillance system The security and fire alarm system is an integral component of the security system. The intruder alarm system is designed for timely detection of a fire, an alarm signal from sensors of fire and security equipment, fire warning of people in the building, the adjacent territory and notification and transmission of information about this to the centralized control panel of the facility. We offer two security and fire alarm systems - these are access control and management systems: ACS and a perimeter security system. Control systems and access management, access control and video surveillance - these names are familiar to almost every person. Access control and regulation systems are most often used to control and restrict access to the territory, to the building, premises, as well as to create a system for automatic control and dosage of events. Video surveillance systems are most often used to guard and control access to the territory, to premises, to any objects, and the perimeter control and surveillance system is often used to protect the perimeter of the perimeter. For more information about access control systems and video surveillance systems, please contact our company.
