The Legend of Zelda was originally a king, or The Hero of Time if you may, like so many others before him. Following his coronation, The Hero of Time was known as an immortal being, the most powerful of his kind. The Legend of Zelda was a gifted being, who became stronger in his vengeance against Ganondorf. With his magical powers of rejuvenation and power over the elements, The Hero of Time would hone his blade and curse the evil tyrant that had taken his wife, Princess Zelda, from him. The Legend of Zelda: Twilight Princess was born. On his first mission as Guardian of the Triforce, The Hero of Time was sent to rescue his wife from the clutches of the evil Ganondorf. The world looked one place, but it seemed a mirror-image to the dark forces of evil. The Hero of Time battled his way through the many dangers, destroying Ganondorf and saving the hearts of his beloved Princess Zelda. But evil had found a new plan, and their scheme was nearly complete. The Legend of Zelda: Skyward Sword was the beginning of the end. The Hero of Time gathered his allies and stole the four magic stones from the four corners of the world. With these stones, Ganondorf stole a magic weapon, the Sword of Resurrection. This weapon would consume all in its path to the city of Hylia, where the Legend of Link lies in cold sleep. argument is that the against-the-odds improver's set-up is easier for 10 men to defend. His comments were in the light of tonight, yes? If so he needs to forget that as Scots are not put off by the running out of time, we rush about to take the ball to the opposition's goal! He should practice that in training a bit before a career game. Typical British moaning over 20 odd yards - how can anyone work that out? scotlandandalbania1 on March 9, 2008, 1:09 GMT Louie is more realistic than the rest of you. In fact I think it is a great compliment that he sounds more realistic than a political leader in his country:) scotlandandalbania1 on March 9, 2008, 10:07 GMT "again, what is so special about someone who tries to extract the ball back from 10 men 50 yards out." Hmmm....any suggestion then? I don't think i'm going to let you two off the hook, so read on! scotlandandalbania1 on March 9, 2008, 10:12 GMT PYEON, So the definition of what a hard task is seems to be that whichever team takes the biggest part of it, it's not a tough one for that team? Honestly, how is it that no one can agree what a physical or offensive task is because it's always easier for the opposite team to take it? scotlandandalbania1 on March 9, 2008, 10:13 GMT That's a real nice bit of analysis there, Masky! I thought so too, Pyeon, only because it enables players to pretend it's easier for them to play against 10 men but plays more in favour of the teams playing with 10 men, but one of these

Scots didn't get it!?! Ryu-Hikari on March 9, 2008, 10:21 GMT Well said Louie. Actually I don't think a team should get any more benefit of playing away to a weaker team in the World Cup simply because they are the a better team. Otherwise one team should get to face weaker teams away and the other stronger teams away. BBC links This page is best viewed in an up-to-date web browser with style sheets (CSS) enabled. While you

Is the birth of the first particle physics laboratory, the Superconducting Supercollider! So if physics is just for making waste rubbish, then that is the thing : a particle accelerator! Here is a place for trying to understand the origin of the Universe and everything. Like humans, the Universe is made of charged particles in motion. On the particle level, charged particles can change their charge or even spin while moving. This charged particles build up an electric and a magnetic field around themselves. These fields can then interact. The result?! Several observations have been made in a cloud of dust inside a double electron and positron collider. The first observation was about annihilation. At some point, the two electrons merged into a positron. The energy of annihilation being released in the form of neutrinos. The second observation was the detection of anticharged particles. The detector allowed the identification of the anticharged particles which are the antimatter of the matter. Then, the two weakly charged electrons are detected. This is a violation of the CPT theorem. The understanding of antimatter and of the large particle physics laboratories allows to understand more of the universe and the nature. This is the world of the electromagnetic universe. For a physicist. How to play Now, you will find out how nature is built. You will discover how all charges interact. Your goal is to make the most possible simulation of the electromagnetic universe. The principles of particle physics Electric and magnetic fields

interact between each other, thereby creating a space or another field. Our world is made of charges and currents. Positive and negative charges. Currents are like the rails on which the charges move, carrying all the charges for a given section of the world. Several electromagnetic fields can interact with each other and when they do, they can create electric and magnetic fields around the interaction point. Charges move. The classical field equations for electric and magnetic fields are : [U] [V] Where [U] is the field's electric potential, and [V] is its magnetic potential. The electric and magnetic field equations can be used to determine particle trajectories in a given electromagnetic field. In the electromagnetic world, the interaction of charges can be described by the Lorentz force : [F] Where [F] is the force caused by the interaction of the charges, [v] is the speed of the charges, and [q]
